

Transmission Right-of-Way Compatible Tree / Shrub List

The following is a list of trees & shrubs that are *generally* compatible within the border zone of the transmission right-of-way; as a rule only woody vegetation with a mature height of 3' or less is allowed in the wire zone. This list is subject to change and accurate only in ideal circumstances. Site specific factors such as conductor height, terrain and corridor width must be taken into account when determining where on the right-of-way and which, *if any*, of the listed species are indeed compatible.

* The wire zone is the area directly under the conductors and extending 15' on each side; the border zone extends from this point out to the edge of the right-of-way.
